

HOPS (NORTH-WESTERN U.S. ONLY)

General Information

GENERAL INFORMATION

- Use only as directed. Read thoroughly and understand the label before making applications.
- The term 'grams of active ingredient per acre' is represented by 'g ai/acre' throughout this product label. See Conversion Table at end of Directions for Use section.
- Thoroughly spray all parts of the plant or crop to obtain the desired result.
- Prepare solution concentrations by mixing the required amount of product with water only in a clean empty spray tank.
- Dispose of any unused spray material at the end of the day. Refer to the Storage and Disposal section of this label for pesticide disposal instruction.
- When a range of rates is indicated, consult your local experimental station, distributor, or agricultural extension agent for the best program suited to your local conditions.
- Ensure that the pH of the water is less than 8.5.
- Absorption of FALGRO 4L into the plant is greatest under slow drying conditions. Night-time applications will be more effective when day-time conditions cause rapid drying. Re-apply FALGRO 4L if significant rain occurs within 2 hours of application.
- FALGRO 4L has a 0-day pre harvest interval (PHI).
- Do not apply using ULV application methods. For aerial applications spray volumes must be greater than 2 gallons per acre (10 gallons per acre for tree crops).
- Consult your local experimental station, distributor, or agricultural extension agent regarding the compatibility of gibberellic acid with other compounds.

Limitations, Restrictions, and Exceptions

HOPS (North-western U.S. only)

Application of FALGRO 4L increases the yield and aids picking of seeded and seedless varieties of Fuggle hops and similar varieties. Make one application of 4 to 6 g ai in 100 - 150 gallons of water/acre when vine growth is 5 - 8 feet long.
