

COTTON - PIMA

General Information

GENERAL INFORMATION

BINARYcq AN should be applied foliarly to supplement agricultural crop, turf and ornamental nutrition. Foliar fertilization is intended as a supplement to a regular fertilization program and will not, by itself, provide all the nutrients normally required by crops or other intended plants.

RECOMMENDATIONS

BINARYcq AN may be applied to many crops (including row crops) that are capable of absorbing nutrients through their leaves.

SUGGESTED DIRECTIONS

BINARYcq AN should be used in all crop protection sprays with minimum volumes of 5 gallons per acre by ground and 2 gallons per acre by aerial application. The maximum concentration of BINARYcq AN should not exceed 2 quarts in 5 gallons of total spray (10% v/v).
