

# GROUNDCOVER PLANTINGS

## General Information

### DESCRIPTION

Lawn and Garden is a premium quality homogeneous fertilizer product of Nitrogen, Phosphate and Potash combined with Sulfur. All of these are formed into a homogeneous pellet that is dust free and gives more uniform distribution of Primary, Secondary Nutrients. It is not merely a blend of several different materials, hence with homogeneous fertilizer there is no segregation.

### Limitations, Restrictions, and Exceptions

### DIRECTIONS FOR USE

### GROUNDCOVER PLANTINGS
