

ROSES, FLOWERING SHRUBS AND EVERGREENS - NEW PLANTING

General Information

DESCRIPTION

Lawn and Garden is a premium quality homogeneous fertilizer product of Nitrogen, Phosphate and Potash combined with Sulfur. All of these are formed into a homogeneous pellet that is dust free and gives more uniform distribution of Primary, Secondary Nutrients. It is not merely a blend of several different materials, hence with homogeneous fertilizer there is no segregation.

Limitations, Restrictions, and Exceptions

DIRECTIONS FOR USE

ROSES, FLOWERING SHRUBS AND EVERGREENS

New plantings: Work $\frac{1}{4}$ lb. into soil at bottom of hole before planting. Set plant, fill hole with soil and press down lightly. WATER THOROUGHLY.
