

GREENS AND TEES - BENTGRASS

General Information

DISPER-SUL Plus Micro-Granule with Trisperse is a minigranular 90%degradable Sulfur that is made with Trisperse (a wetting, suspending and swelling agent). By applying this product you get uniform distribution an dispersal in turf and garden applications.

Limitations, Restrictions, and Exceptions

Apply to dry turf. Watering after application will aid in the dispersion of the sulfur granules. To minimize particle pick-up, do not collect clippings for the first mowing after treatment. Early fall applications are preferred.

Apply Sulfur in the spring or early fall until the desired soil pH is attained (5.6-6.5). Two applications per year may be used in regions with longer growing seasons or on greens with a high buffering capacity (CEC>15).
