

FAIRWAYS, LAWN AND GARDEN AREAS - SANDY SOILS PH 7.5 TO 6.5

General Information

DISPER-SUL Plus Micro-Granule with Trisperse is a minigranular 90%degradable Sulfur that is made with Trisperse (a wetting, suspending and swelling agent). By applying this product you get uniform distribution an dispersal in turf and garden applications.

Limitations, Restrictions, and Exceptions

On medium to heavy textured soils (loam to clay loam) use the higher rate and frequency if a more rapid pH adjustment is desired. Soil pH should be monitored on gardens, lawns, and other turf areas when Sulfur is being used to reduce pH. Turf and garden areas should be sampled twice a year, May and November. Soil samples should be taken from the top one inch of soil.
