

## **GROUND APPLICATIONS**

### General Information

### General Information

Sav-Oil is a nonionic blend of special surfactants and highly refined spray oil that is designed for use with a range of pesticides where an oil adjuvant is recommended. Sav-Oil works to improve the pesticide application by modifying the wetting and deposition characteristics of the spray solution. Sav-Oil increases the activity of most herbicides; therefore, care must be taken in treating sensitive crops during periods when plants are subjected to drought stress, high temperature and high humidity. Sav-Oil is effective when used with air induction nozzles.

Refer in the label regarding mixing instructions.

### Directions for Use

Read directions and conditions of sale and warranty before purchasing or using this product. Use strictly in accordance with accompanying pesticide label warnings and directions. Sav-Oil may be applied by ground, CDA or aerial application equipment along with any other spray equipment recommended by the pesticide label.

### Limitations, Restrictions, and Exceptions

For Ground Applications: Sav-Oil can be substituted for traditional 83/17 Crop Oil spray adjuvants at significantly lower use rates. Sav-Oil is generally recommended at a rate of 2 quarts per 100 gallons (0.5% v/v) of spray solution. For spray volumes below 12.5 gallons per acre, use Sav-Oil at 1 pint to the acre. Refer in the label regarding conversion table on substituting Sav-Oil in place of standard crop oil concentrate adjuvants. Always follow recommendations of the pesticide label if higher rates are required.

DO NOT ADD THIS PRODUCT AT A RATE THAT EXCEEDS 2.5% v/v OF SPRAY VOLUME.
