

FOR USE IN RESERVOIRS, FISH PONDS ETC.

General Information

H2O-BLUE will give your water a cosmetic beauty ranging from ocean blue to aquamarine. H2O-BLUE is a combination of fixed dyes that will disperse sunlight rays while restoring discolored water to a natural ocean blue look. Use H2O-BLUE wherever discoloration is a problem. When used according to label directions, H2O-BLUE is not harmful to fish, turf, birds and other aquatic species.

Limitations, Restrictions, and Exceptions

DIRECTIONS FOR USE

Apply H2O-BLUE directly into the water to be treated. In general, one gallon of H2O-BLUE will treat one acre of water with a 4 foot average depth. Specific use rates will vary depending on water quality. Apply either directly from container along shoreline or pour from a slow moving boat. Wind

and water currents will slowly disperse and mix H2O-BLUE uniformly throughout the entire body of water. H2O-BLUE can also be applied by a handheld \"Hudson type\" pressure sprayer. Use caution in windy conditions.

DO NOT apply this product to water intended for human consumption. DO NOT use this product in streams, rivers or other bodies of water not under control of the user. DO NOT use in water that has been or will be chlorinated.
