

## **FOLIAR APPLICATION - FRUIT TREES**

### General Information

#### General Information

BRANDT SEQUESTAR RMX-8 is recommended for crops such as alfalfa, almonds, avocados, apples, broccoli, cabbage, cauliflower, carrots, celery, citrus, corn, grapes, lettuce, milo, melons, nectarines, peaches, pears, pecans, peppers, plums, prunes, potatoes, sorghum, sugar beets, sweet corn, sugar cane, strawberries, tomatoes, turnips, walnuts, watermelons, wheat and most other crops.

This product gives best results when crops have adequate supplies of water and major nutrients, and are not under stress for other reasons. Conditions which are responsible for one particular deficiency can also induce deficiencies of other trace elements.

#### Directions For Use

Mixing: BRANDT SEQUESTAR RMX-8 is soluble in water. This product should be added slowly to the main bulk of the water while it is being agitated. Agitation should continue for a minute or two after the addition of this product. If pesticides are to be used with the spray mix, add them after the BRANDT SEQUESTAR RMX-8 has dissolved.

Compatibility: If the desired combination of fertilizers or pesticides has not been previously used, a compatibility test is recommended.

#### Limitations, Restrictions, and Exceptions

Foliar Application: Foliar sprays of BRANDT SEQUESTAR RMX-8 are intended to complement good soil fertility programs by supplying nutrients directly to the foliage of crops during critical growth stages. Foliar soluble sprays may improve absorption and efficiency of micronutrient uptake. For maximum effect from any foliar spray, apply during morning or late evening, not in bright sunshine.

Multiple chelate applications should be made at no less than 10 to 14 day intervals to reduce the potential for crop injury.
