

SOIL APPLICATION: FIELD CROPS

General Information

GENERAL INFORMATION

Brandt Sequestar 14% Cu is a fully chelated, water soluble, powdered form of copper EDTA and is recommended for the prevention and correction of copper deficiency in crops. The preferred use is as a soil application to prevent the deficiency although it may also be used as a foliar spray to provide correction when a soil application is impractical.

Limitations, Restrictions, and Exceptions

SOIL APPLICATION: FIELD CROPS

Soil Application: BRANDT SEQUESTAR 14% Cu is recommended for use on all types of soil. To ensure uniform coverage, the product should be dissolved in water or fluid fertilizer, or dry blended with water soluble fertilizers. For trees or individual plants, the chelate may be blended with an inert (such as soil or sand) or sprinkled directly on the soil uniformly under the plant's drip line, then watered in. Soil applications may also be made by dissolving in water and then mixing or metering into drip, sprinkler or furrow irrigation systems.

The rate given is based on broadcast application. If broadcast rates are used for spot or banded applications, phytotoxicity may result.
