

VEGETABLES

General Information

DESCRIPTION

REPELLER is specially processed all natural garlic concentrate that is odorless minutes after it is applied and will not affect the taste of edible plants. REPELLER repels, rather than kills insects, so it is important to apply before infestation. REPELLER can be applied as often as weekly.

COMPATIBILITY

REPELLER is compatible with most fertilizers, fungicides and pesticides. Do not mix with poisonous or harsh chemicals. In all cases, it is recommended that a jar test be made to determine the compatibility of REPELLER with other materials before proceeding with high volume mixing. Ideal spraying time is in the very late afternoons or early mornings. Never apply in the heat of the day.

Limitations, Restrictions, and Exceptions

VEGETABLES

Do not spray REPELLER in concentrations under 2%. Agitate well if spray is allowed to sit overnight.
